EXPERIMENT-15

ANALYSIS OF WEB LOGS USING WEBALIZER

AIM:

To analyse different types of web logs using the webalizer tool.

REQUIREMENTS:

Computer, webalizer windows version, web server log file.

PROCEDURE:

1) open the windows webalizer version.

2) obtain a web server log file by downloading one from the web, if required.

3) Select or provide the web log file as input.

4) click the RUN webalizer option.

5) Load the log file into webalizer.

6) wait for the tool to process the log file.

7) Observe the generated report.

8) Study the available information about website activity.

INPUT:

A web server log file.

OUTPUT:

A web log analysis report generated by webalizer.

RESULT:

Thus, the web server log file was analysed using webalizer, and the corresponding report was obtained.
