EXPERIMENT - 3

STUDY OF NETWORK CABLES

AIM:

understand & study of diff types of network cables.

DESCRIPTION:

This experiment was conducted to study the construction and use of straight through and crossover twisted pair cables. The color coding standards were followed to prepare the cables using RJ45 connectors and a crimping tool. The prepared cables were tested to verify: Proper, network, connectivity btw devices

1) Difference btw cross cable & straight cable.

straight cable: used to connect diff devices.

ex: pc to switch/ Router.

Cross cable: used to connecte similar device.

ex: pc to pc or switch to switch

2) The Type of cable is used to connect two pcs. are cross cable. The cross cable is commonly used to connect pc to pc, switch to switch, Router to Router.

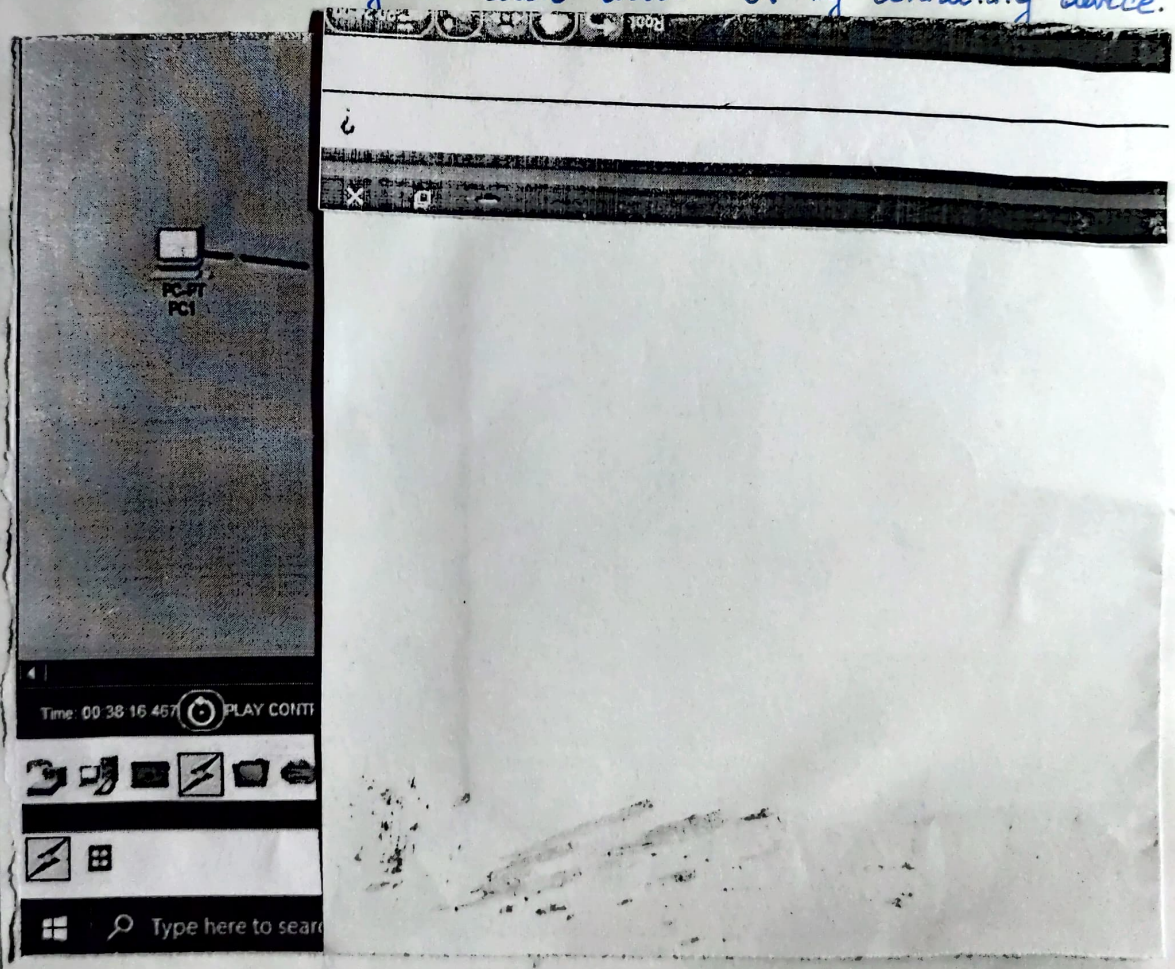

3) Type of cable used to connect a router/switch to your pc.

4) The category of twisted pair cable in the lab to connect the PC to the CAT 6 UP - category.

5) Learned to arrange wires in the correct T568A/ T568B color sequence and crime the RJ45 connector.

6) Challenges faced is where arranging the wires correctly and crimping the connectivity properly.

7) The cable was successfully prepared and network connectivity was verified using a cable tester or by connecting device.

RESULT:

The straight & crossover cables were successfully prepared and tested.
