EXPERIMENT - 4

SETTING UP A LOCAL AREA NETWORK

AIM:

To design, set up and configure a local area network connecting 4 computer through a network switch, assign static Ip address to all devices verify connectivity using the ping command and demonstrate data sharing across the network.

interface

h. 4 Pcs

step2: Connect all pc's and the server to the switch using copper straight through cables.

step 3: Configure all Ip addresses of all Pcs & the server so that they belong to same network.

step 4: verify that all cable connection are active.

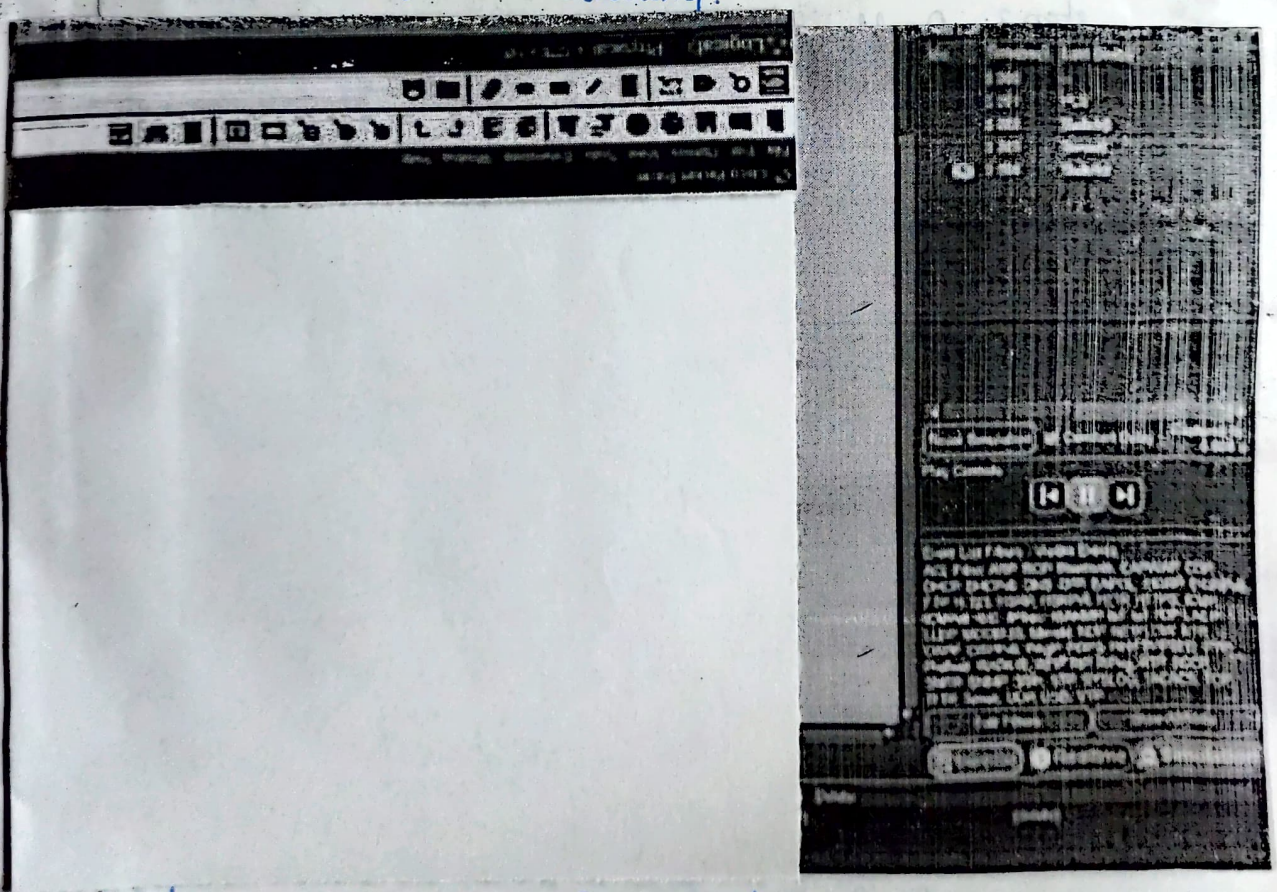

step 5: Test network connectivity by opening the Command Prompt on a pc using ping command to communicate with another pc or server.

step 6: Enable the HTTP services on the server by selecting server → services → HTTP ON.

step 7: Open web browser on pc & enters the servers default web page.

step 8: switch from realtime mode to simulation mode.

step 9: Verify that successful communication takes place blw the pc's & the server, demonstrating proper LAN operation & data sharing.

and a server, communication blw devices and verified through Ping and web access. and Packet flow was observed successfully in simulation Mode.
