EXPERIMENT 8

NMAP TO DISCOVER LIVE HOSTS USING NMAP SCANS.

AIM:

To discover live hosts on a network using Nmap host-discovery scans - ARP scan. ICMP scan, and TCP/UDP Ping scan - and to understand which protocol operates at which layer of TCP/IP model, when each one applies.

PROCEDURE:

1) log into TRYHACKME and open the NMAP live host Discovery room

2) Work through tasks 1-3 and answer the simulator based question.

3) Deploy the lab network in Task 4 & start the attackabox note target subnet

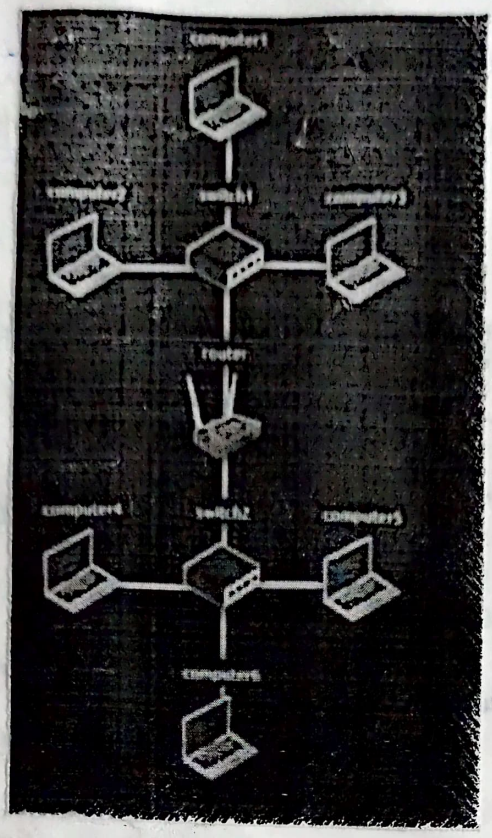

4) Run in ARP Scan. PR [Subnet>/24 and record how many host respond.

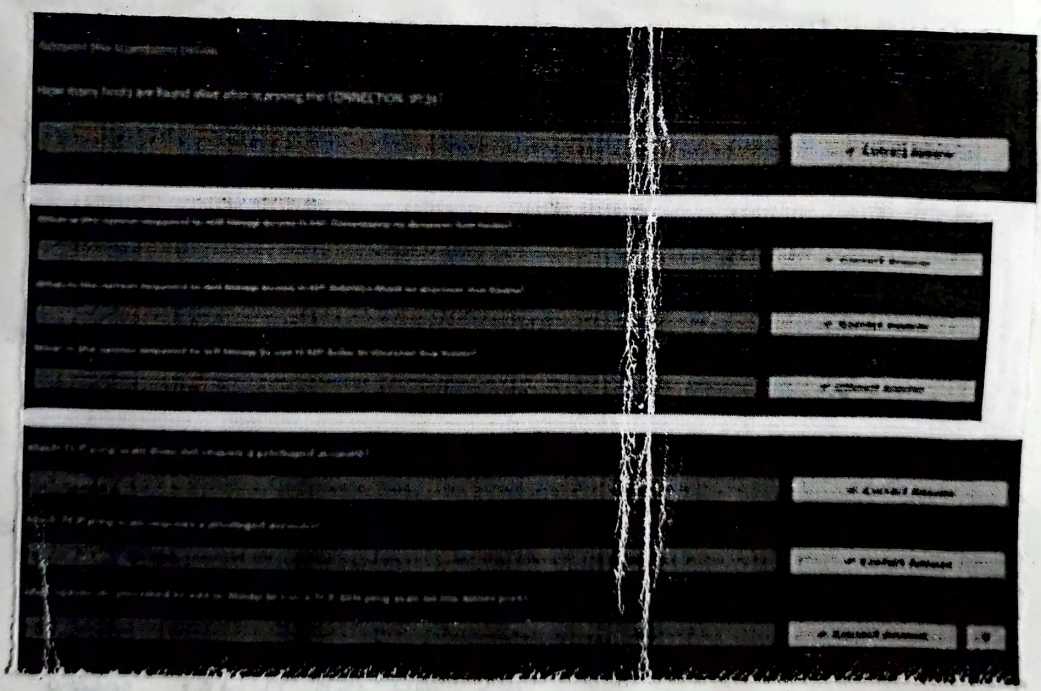

6) Run ICMP time stamp and ICMP address.

7) Run TCN SYN (PS) TCP ACK, UDP Scan.

8) optionally capture the scan traffic using tcpdump of wireshark on the interface.

9) complete the knowledge check que and proceed to NMAP Bare Port Scan room

RESULT:

Thus Nmap host discovery scan were performed successfully using TCP, SYN, FCP, ACK UDP Ping technique, the scan result network traffic were observed.
